similar to RAL 7040

SAY YES TO COLOUR AND TO PROTECTION

Kömmerling AcrylColor is more than just a colour concept offering a wide array of options for your window profile design. It also in fact provides effective lasting protection – meaning your windows will bring you joy for many years to come.

Colour-fast

The colour does not peel off, flake or bleach – even after years

Weather resistant

Withstands environmental effects, extreme climate conditions and major temperature fluctuations

Easy to clean

Non-porous, and therefore dirt repellent, virtually maintenance-free and easy to clean

Resistant

The exceptionally high level of scratch resistance is unrivalled by any other PVC-U

Heat-resistant

The pigmentation reflects the light so the profiles are subjected to minimal heat

100% recyclable

PVC-U profiles with an AcrylColor surface are 100 % recycled into the material cycle

Kömmerling AcrylColor stands out from the crowd – not just because it looks great, but because of its special protective function too.

It is a robust, indissoluble and homogeneous coloured acrylic layer that is firmly bonded to the PVC-U profile. The result: Long-lasting colour fastness and high scratch resistance.
